INDEPENDENT AUDITOR'S REPORT

To management and Shareholders of Banka Kombëtare Tregtare Kosovë sh.a

Opinion

We have audited the financial statements of **Banka Kombëtare Tregtare Kosovë sh.a** (the Bank), which comprise the statement of financial position as at December 31, 2024, the statement of profit or loss and other comprehensive income, statement of changes in equity and statement of cash flows for the year then ended, and notes to the financial statements, including a summary of significant accounting policies.

In our opinion, the accompanying financial statements present fairly, in all material respects, the financial position of the Bank as at December 31, 2024, and its financial performance and its cash flows for the year then ended in accordance with International Financial Reporting Standards (IFRSs).

Basis for Opinion

We conducted our audit in accordance with International Standards on Auditing (ISAs). Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statements section of our report. We are independent of the Bank within the meaning of ethical requirements applicable in the audit of financial statements in Kosovo and have fulfilled our other responsibilities under those ethical requirements and IESBA code. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Other information

Management is responsible for the other information. The other information comprises the information included in the Annual Report of the Bank in accordance with the requirements of Law No. 04/L-093. The Annual Report of the Bank is expected to be made available to us after the date of our audit report.

Our opinion on the financial statements does not cover the other information and we will not express any form of assurance conclusion thereon. In connection with our audit of the financial statements, our responsibility is to read the other information identified above when it becomes available and, in doing so, consider whether the other information is materially inconsistent with the financial statements or knowledge obtained in the audit, or appears to be materially misstated. When reading the Annual Report of the Bank, if we conclude that there is a material misstatement therein, we are required to communicate the matter to those charged with governance.

Responsibilities of Management and Those Charged with Governance for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with IFRS and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Bank's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Bank or to cease operations, or has no realistic alternative but to do so.

Those charged with governance are responsible for overseeing the Bank's financial reporting process.

Auditor's Responsibilities for the Audit of the Financial Statements

The objectives of our audit are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinion. Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with ISAs will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As part of an audit in accordance with ISAs, we exercise professional judgment and maintain professional scepticism throughout the planning and performance of the audit. We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the entity's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.
- Conclude on the appropriateness of management's use of the going concern basis of accounting and based on the audit evidence obtained, whether a material uncertainty exists related to events If we conclude that a material uncertainty exists, we are required to draw attention in our auditor's report to the related disclosures in the consolidated financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditor's report. However, future events or conditions may cause the Bank to cease to continue as a going concern.
- Evaluate the overall presentation, structure, and content of the financial statements, including the
 disclosures, and whether financial statements represent the underlying transactions and events in a
 manner that achieves fair presentation.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit and significant audit findings, including any significant deficiencies in internal control that we identify during our audit.

1. General

Banka Kombëtare Tregtare Kosovë sh.a (the "Bank") is a commercial bank offering a wide range of universal services. The Bank provides banking services to public and privately-owned enterprises and to individuals in Kosova.

Banka Kombëtare Tregtare J.S.C. Kosova (the "Bank") is a fully owned subsidiary of Banka Kombëtare Tregtare J.S.C in Albania. BKT – Kosova, registered on 30 August 2007 with the Central Bank of Republic of Kosova ('CBK') to operate as a foreign branch in the Republic of Kosova and is subject to CBK regulations. On April 30, 2018, Banka Kombëtare Tregtare Kosova Branch changed its status from foreign branch to Joint Stock Company. Now its bank license has changed from Banka Kombëtare Tregtare Kosova Branch to Banka Kombëtare Tregtare J.S.C Kosova. The Bank offers a wide range of products and services to public and privately-owned enterprises and to individuals in the Republic of Kosova. The main source of funding for the Bank are deposits, which are accepted in various forms including current accounts, demand and term deposits, in both EUR and foreign currency. BKT offers a variety of corporate and consumer loans, debit and credit cards, ATMs, sophisticated alternative channels, qualified international banking services and various treasury products. The network of BKT Kosova consists of 23 units. Seven units are located in Prishtina, and the other units are located in Prizren, Peja, Gjilan, Ferizaj, Mitrovica, Gjakova, Vushtrri, Fushe Kosova, Podujeva, Drenas, Rahovec, Viti, Lipjan, Skenderaj, Theranda and Klina. The number of employees at the end of 2024 was 492 (2023: 466).

Share capital

On 31 December 2024 the authorised share capital is EUR 31,000,000 (2023: EUR 31,000,000). The Bank is a joint stock company 100% owned by Banka Kombëtare Tregtare J.S.C in Albania. All issued shares are fully paid. The holder of ordinary shares is entitled to receive dividends, if declared. All shares rank equally regarding the Bank's residual assets.

2. Basis of preparation

(a) Statement of compliance

The financial statements have been prepared in accordance with International Financial Reporting Standards (IFRSs). They have been prepared under the assumption that the Bank operates on a going concern basis.

(b) Basis of measurement

The financial statements have been prepared on the historical cost basis except for financial instruments measured at FVOCI which are measured at fair value.

In addition, for financial reporting purposes, fair value measurements are categorised into Level 1, 2 or 3 based on the degree to which the inputs to the fair value measurements are observable and the significance of the inputs to the fair value measurement in its entirety, which are described as follows:

- Level 1 inputs are quoted prices (unadjusted) in active markets for identical assets or liabilities that the entity can access at the measurement date;
- Level 2 inputs are inputs, other than quoted prices included within Level 1, that are observable for the asset or liability, either directly or indirectly; and
- Level 3 inputs are unobservable inputs for the asset or liability.

(c) Functional and presentation currency

These financial statements are presented in EUR, which is also the Bank's functional and presentation currency.

(d) Use of estimates and judgements

The preparation of financial statements requires management to make judgements, estimates and assumptions that affect the application of accounting policies and the reported amounts of assets, liabilities, income and expenses. Actual results may differ from these estimates.

Estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognised in the period in which the estimate is revised and in any future periods affected.

2. Basis of preparation (continued)

(d) Use of estimates and judgements (continued)

Information about significant areas of estimation uncertainty and critical judgements in applying accounting policies that have the most significant effect on the amounts recognised in the financial statements are described in note 4 and 5.

3. Significant accounting policies

The accounting policies set out below have been applied consistently to all periods presented in these financial statements.

(a) Foreign currency transactions

Transactions in foreign currencies are translated into the functional currency of the Bank at the spot exchange rate at the date of the transaction. Monetary assets and liabilities denominated in foreign currencies at the reporting date are retranslated into the functional currency at the spot exchange rate at that date. The foreign currency gain or loss on monetary items is the difference between amortised cost in the functional currency at the beginning of the period, adjusted for effective interest and payments during the period, and the amortised cost in foreign currency translated at the exchange rate at the end of the period. Non-monetary assets and liabilities denominated in foreign currencies that are measured at fair value are retranslated into the functional currency at the spot exchange rate at the date that the fair value was determined. Foreign currency differences arising on retranslation are recognised in profit or loss.

Non-monetary assets and liabilities denominated in foreign currencies, which are stated at historic cost, are translated at the foreign exchange rate ruling at the date of the transaction.

The assets and liabilities of foreign operations are translated into Euro at spot exchange rates at the reporting date. The income and expenses of foreign operations are translated into Euro at spot exchange rates at the dates of the transactions. Foreign currency differences on the translation of foreign operations are recognised directly in other comprehensive income.

The Bank during the normal course of business enters into spot foreign exchange transactions with settlement dates 1 or 2 days after the trade date. These transactions are recorded in the financial statements on the settlement date. Foreign currency differences are recognised in profit or loss on the settlement date.

Currency	31-Dec-24	31-Dec-23
USD	1.0389	1.1050
GBP	0.8292	0.86905
CHF	0.9412	0.9260
ALL	0.0102	0.0096
TRY	0.02722	0.03063

(b) Interest income and expense

Interest income and expense are recognised in profit or loss using the effective interest rate method. The effective interest rate is the rate that exactly discounts the estimated future cash payments and receipts through the expected life of the financial asset or liability (or, where appropriate, a shorter period) to the carrying amount of the financial asset or liability. When calculating the effective interest rate, the Bank estimates future cash flows considering all contractual terms of the financial instrument but not future credit losses.

The calculation of the effective interest rate includes all fees paid or received that are an integral part of the effective interest rate. Transaction costs include incremental costs that are directly attributable to the acquisition or issue of a financial asset or liability.

Notes to the Financial Statements for the year ended 31 December 2024 (Amounts in EUR, unless otherwise stated)

3. Significant accounting policies (continued)

(c) Fees and commission

Fees and commission income and expenses that are integral to the effective interest rate on a financial asset or liability are included in the measurement of the effective interest rate.

Other fees and commission income are recognised as the related services are performed. Other fees and commission expense relate mainly to transaction and service fees, which are expensed as the services are received.

(d) Current and deferred income tax expense

Income tax expense comprises current and deferred tax. Income tax expense is recognized in the profit or loss except to the extent that it relates to items recognized directly in equity or in other comprehensive income. Current tax is the expected tax payable on the taxable income for the year, using tax rates enacted or substantively enacted at the reporting date, and any adjustment to tax payable in respect of previous years.

Deferred tax is provided for temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes.

Deferred tax is not recognised for the following temporary differences: the initial recognition of goodwill, the initial recognition of assets or liabilities in a transaction that is not a business combination and that affects neither accounting nor taxable profit or loss, and differences relating to investments in subsidiaries to the extent that they probably will not reverse in the foreseeable future. Deferred tax is measured at the tax rates that are expected to be applied to the temporary differences when they reverse, based on the laws that have been enacted or substantively enacted by the reporting date.

In determining the amount of current and deferred tax the Bank considers the impact of uncertain tax positions and whether additional taxes and interest may be due.

The Bank believes that its accruals for tax liabilities are adequate for all open tax years based on its assessment of many factors, including interpretations of tax law and prior experience. This assessment relies on estimates and assumptions and may involve a series of judgments about future events. New information may become available that causes the Bank to change its judgment regarding the adequacy of existing tax liabilities; such changes to tax liabilities will impact tax expense in the period that such a determination is made.

A deferred tax asset is recognised only to the extent that it is probable that future taxable profits will be available against which the asset can be utilised. Deferred tax assets are reviewed at each reporting date and are reduced to the extent that it is no longer probable that the related tax benefit will be realised.

The applicable corporate tax rate in Republic of Kosovo is 10% (31 December 2023: 10%). Under Kosovo tax legislation system, tax losses can be carried forward to be offset against future taxable income for up to four years.

(e) Financial assets and liabilities

(i) Recognition

The Bank initially recognises financial assets and liabilities on the date at which they are originated. Regular way purchases and sales of financial assets are recognised on the trade date at which the Bank commits to purchase or sell the asset, with the exception of spot foreign exchange transactions which are recognized on settlement date. All other financial assets and liabilities are initially recognised on the trade date at which the Bank becomes a party to the contractual provisions of the instrument. A financial asset or financial liability is initially measured at fair value corrected by (for an item not subsequently measured at fair value through profit or loss) transaction costs that are directly attributable to its acquisition or issue.

Transaction costs that are directly attributable to the acquisition or issue of financial assets and financial liabilities (other than financial assets and financial liabilities at fair value through profit or loss) are added to or deducted from the fair value of the financial assets or financial liabilities, as appropriate, on initial recognition. Transaction costs directly attributable to the acquisition of financial assets or financial liabilities at fair value through profit or loss are recognised immediately in profit or loss.

(ii) De-recognition

The Bank derecognises a financial asset when the contractual rights to the cash flows from the financial asset expire, or when it transfers the rights to receive the contractual cash flows on the financial asset in a transaction in which substantially all the risks and rewards of ownership of the financial asset are transferred. Any interest in transferred financial assets that is created or retained by the Bank is recognised as a separate asset or liability.

If the Bank retains substantially all the risks and rewards of ownership of a transferred financial asset, the Bank continues to recognise the financial asset and also recognises a collateralised borrowing for the proceeds received. The Bank derecognises financial liabilities when, and only when, the Bank's obligations are discharged, cancelled or they expire. The difference between the carrying amount of the financial liability derecognised and the consideration paid and payable is recognised in profit or loss.

The Bank enters into transactions whereby it transfers assets recognised on its statement of financial position, but retains either all or substantially all of the risks and rewards of the transferred assets or a portion of them. If all or substantially all risks and rewards are retained, then the transferred assets are not derecognised from the statement of financial position. Transfers of assets with retention of all or substantially all risks and rewards include, for example, securities lending and repurchase transactions.

When assets are sold to a third party with a concurrent total rate of return swap on the transferred assets, the transaction is accounted for as a secured financing transaction similar to repurchase transactions.

In transactions in which the Bank neither retains nor transfers substantially all the risks and rewards of ownership of a financial asset, it derecognises the asset if it does not retain control over the asset. The rights and obligations retained in the transfer are recognised separately as assets and liabilities as appropriate. In transfers in which control over the asset is retained, the Bank continues to recognise the asset to the extent of its continuing involvement, determined by the extent to which it is exposed to changes in the value of the transferred asset.

In certain transactions the Bank retains the obligation to service the transferred financial asset for a fee. The transferred asset is derecognised in its entirety if it meets the derecognition criteria. An asset or liability is recognised for the servicing contract, depending on whether the servicing fee is more than adequate (asset) or is less than adequate (liability) for performing the servicing.

Notes to the Financial Statements for the year ended 31 December 2024 (Amounts in EUR, unless otherwise stated)

3. Significant accounting policies (continued)

- (e) Financial assets and liabilities (continued)
- (ii) De-recognition (continued)

When a loan is classified as non-performing Bank will settle it out of the balance sheet by the following criteria and terms:

- a) Credit exposures that are not secured by collateral, either in pledge form or in mortgage form and are classified as non-performing exposure, shall be written off from the balance sheet within eighteen (18) months of the period when these exposures have been classified in this category
- b) Credit exposures that are secured by pledged (movable) collateral and are classified as non-performing must be written off from the balance sheet within thirty-six (36) months of the period when they were classified non-performing;
- c) Credit exposures that are secured by immovable collateral/mortgages and are classified as non-performing exposure must be written off from the balance sheet within sixty (60) months from the period when they are classified as "non-performing".
- d) Credit exposures that are secured with combined collateral in form of pledges and mortgages and in cases when the mortgages are securing more than 50% of the credit exposures at the moment of approval then in order to proceed with write off from the balance sheet, these exposures will be treated as per the paragraph: c of this article

(iii) Classification and initial measurement of financial assets

All financial assets are initially measured at fair value adjusted for transaction costs (where applicable). Financial assets, other than those designated and effective as hedging instruments, are classified into the following categories:

- amortised cost
- fair value through profit or loss (FVTPL)
- fair value through other comprehensive income (FVOCI)

The classification is determined by both:

- the entity's business model for managing the financial asset
- the contractual cash flow characteristics of the financial asset.

All income and expenses relating to financial assets are recognised in profit or loss.

Assessment of whether contractual cash flows are solely payments of principal and interest (SPPI)

As per the new standard, one of the conditions for financial assets to be classified either under 'amortised cost' or 'Fair Value Through Profit or Loss ("FVTPL") category is that the contractual terms of the financial asset should give rise on specified dates to cash flows that are solely payments of principal and interest on the principal amount outstanding. The Bank has performed the SPPI test and has determined the business models for its financial assets.

- Business model assessment

There are three business models under IFRS 9 – 'Held to Collect ("HTC")', 'Held to Collect and Sell ("HTCS")' and 'Other ("Other BM")'.

- 1. Under the HTC model, cash flows result from collecting contractual payments. If an SPPI product is HTC, it is measured at amortised cost.
- 2. Under HTCS, cash flows result from contractual payments, as well as from selling the financial assets. If an SPPI product is HTCS, it is measured at fair value though other comprehensive income ("FVOCI").
- 3. Other BM are those that are neither HTC, nor HTCS. One example could be a model under which trading is the primary purpose with contractual payment collection not constituting an integral part of the model. If a product (SPPI or not) is held under Other BM, it is measured at fair value though profit or loss ("FVTPL"). The Bank has assessed the business model for its financial assets as follows;

Notes to the Financial Statements for the year ended 31 December 2024

(Amounts in EUR, unless otherwise stated)

3. Significant accounting policies (continued)

(e) Financial assets and liabilities (continued)

(iii) Classification and initial measurement of financial assets (continued)

Treasury

Treasury assets consist of cash or equivalents, Government Bonds, Investment securities such as Eurobonds, Bonds and Certificates.

Investment securities are accounted for depending on their classification as either Financial instruments measured at amortized cost or Financial instruments measured at FVOCI and in some cases as HTC.

The business model of the Bank under IFRS 9 is:

- "HTC" for HTM products. Such products shall be measured at amortised cost;
- "HTCS" for AFS products. Such products shall be measured at FVOCI; and
- "Other BM" for TRD products and shall be measured at FVTPL.

Retail

The Retail assets consist of various financing facilities to individuals (e.g. Mortgage loans, Consumer loans, Home improvement loans, Car loans, Credit cards). These products are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market and which are held for collection of contractual cash flows of principal and interest.

The fair value of the Retail assets is not a critical aspect in the Bank's management of the portfolio.

The business model of the Banks under IFRS 9 is "HTC" and the Retail loans shall be measured at amortised cost.

Corporate

The Corporate assets consist of various financing facilities to corporates (e.g. Cash loans, Non-cash loans, Agro loans, Project & structured finance, Business credit cards). These products are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market and which are held for collection of contractual cash flows of principal and interest.

The fair value of the Corporate assets is not a critical aspect in the Bank's management of the portfolio.

The business model of the Banks under IFRS 9 is "HTC" and the corporate loans shall be measured at amortised cost.

(iv) Subsequent measurement of financial assets

Financial assets at amortised cost

Financial assets are measured at amortised cost if the assets meet the following conditions (and are not designated as FVTPL):

- they are held within a business model whose objective is to hold the financial assets and collect its contractual cash flows
- the contractual terms of the financial assets give rise to cash flows that are solely payments of principal and interest on the principal amount outstanding

After initial recognition, these are measured at amortised cost using the effective interest method.

Discounting is omitted where the effect of discounting is immaterial. The Bank's cash and cash equivalents, loans and most of other receivables fall into this category of financial instruments as well as government bonds and forfeiting instruments that were previously classified as held-to-maturity under IAS 39.

(e) Financial assets and liabilities (continued)

(iv) Subsequent measurement of financial assets (continued)

Financial assets at fair value through profit or loss (FVTPL)

Financial assets that are held within a different business model other than 'hold to collect' or 'hold to collect and sell' are categorised at fair value through profit and loss. Further, irrespective of business model financial assets whose contractual cash flows are not solely payments of principal and interest are accounted for at FVTPL. All derivative financial instruments fall into this category, except for those designated and effective as hedging instruments, for which the hedge accounting requirements apply.

The category also contains an equity investment. In the current financial year, the fair value was determined in line with the requirements of IFRS 9, which does not allow for measurement at cost. Assets in this category are measured at fair value with gains or losses recognised in profit or loss. The fair values of financial assets in this category are determined by reference to active market transactions or using a valuation technique where no active market exists. The Bank determined that in the current period the Fair Value of these investments approximates to their carrying amount. Government bonds that are held for trading are classified as held-for-trading under IAS 39 fall into this category.

Financial assets at fair value through other comprehensive income (FVOCI)

The Group accounts for financial assets at FVOCI if the assets meet the following conditions:

- they are held under a business model whose objective it is "hold to collect" the associated cash flows and sell and
- the contractual terms of the financial assets give rise to cash flows that are solely payments of principal and interest on the principal amount outstanding.

Any gains or losses recognised in other comprehensive income (OCI) will be recycled upon de-recognition of the asset. The Bank's government bonds, treasury notes and treasury bills, corporate bonds, promissory notes, assets backed securities and equity portfolio that were previously classified as available for sale fall into this category.

(v) Offsetting

Financial assets and liabilities are set off and the net amount presented in the statement of financial position when, and only when, the Bank has a legal right to set off the amounts and intends either to settle on a net basis or to realise the asset and settle the liability simultaneously. Income and expenses are presented on a net basis only when permitted by the accounting standards, or for gains and losses arising from a group of similar transactions such as in the Bank's trading activity.

(vi) Amortised cost measurement

The amortised cost of a financial asset or liability is the amount at which the financial asset or liability is measured at initial recognition, minus principal repayments, plus or minus the cumulative amortisation using the effective interest method of any difference between the initial amount recognised and the maturity amount, minus any reduction for impairment.

Notes to the Financial Statements for the year ended 31 December 2024 (Amounts in EUR, unless otherwise stated)

3. Significant accounting policies (continued)

(e) Financial assets and liabilities (continued)

(vii) Fair value measurement

Fair value is the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date.

When available, the Bank measures the fair value of an instrument using quoted prices in an active market for that instrument. A market is regarded as active if quoted prices are readily and regularly available and represent actual and regularly occurring market transactions on an arm's length basis.

If a market for a financial instrument is not active, the Bank establishes fair value using a valuation technique. Valuation techniques include using recent arm's length transactions between knowledgeable, willing parties (if available), reference to the current fair value of other instruments that are substantially the same, discounted cash flow analyses and option pricing models. The chosen valuation technique makes maximum use of market inputs, relies as little as possible on estimates specific to the Bank, incorporates all factors that market participants would consider in setting a price, and is consistent with accepted economic methodologies for pricing financial instruments. Inputs to valuation techniques reasonably represent market expectations and measures of the risk-return factors inherent in the financial instrument. The Bank calibrates valuation techniques and tests them for validity using prices from observable current market transactions in the same instrument or based on other available observable market data.

When an asset is acquired or a liability is assumed in an exchange transaction for that asset or liability, the transaction price is the price paid to acquire the asset or received to assume the liability (an entry price). In contrast, the fair value of the asset or liability is the price that would be received to sell the asset or paid to transfer the liability (an exit price).

In many cases the transaction price equals the fair value (that might be the case when on the transaction date the transaction to buy an asset takes place in the market in which the asset would be sold). When determining whether fair value at initial recognition equals the transaction price, the Bank considers factors specific to the transaction and to the asset or liability.

When transaction price provides the best evidence of fair value at initial recognition, the financial instrument is initially measured at the transaction price and any difference between this price and the value initially obtained from a valuation model is subsequently recognised in profit or loss depending on the individual facts and circumstances of the transaction but not later than when the valuation is supported wholly by observable market data or the transaction is closed out.

(viii) Impairment of financial assets

IFRS 9's impairment requirements use more forward-looking information to recognise expected credit losses – the 'expected credit loss (ECL) model'. This replaces IAS 39's 'incurred loss model'.

Restructured loans are kept directly in Bucket 2 for minimum 2 years based on the payment process in line with Central Bank regulation on NPE.

Instruments within the scope of the new requirements included loans and other debt-type financial assets measured at amortised cost and FVOCI, trade receivables, contract assets recognised and measured under IFRS 15 and loan commitments and some financial guarantee contracts (for the issuer) that are not measured at fair value through profit or loss. Recognition of credit losses is no longer dependent on the Bank first identifying a credit loss event. Instead the Bank considers a broader range of information when assessing credit risk and measuring expected credit losses, including past events, current conditions, reasonable and supportable forecasts that affect the expected collectability of the future cash flows of the instrument.

In applying this forward-looking approach, a distinction is made between:

- financial instruments that have not deteriorated significantly in credit quality since initial recognition or that have low credit risk ('Stage 1') and
- financial instruments that have deteriorated significantly in credit quality since initial recognition and whose credit risk is not low ('Stage 2').
- 'Stage 3' would cover financial assets that have objective evidence of impairment at the reporting date.
- '12-month expected credit losses' are recognised for the first category while 'lifetime expected credit losses' are recognised for the second category.

(e) Financial assets and liabilities (continued)

(viii) Impairment of financial assets (continued)

Measurement of the expected credit losses is determined by a probability-weighted estimate of credit losses over the expected life of the financial instrument. Significant changes defines: IFRS 9 has advised to take into account qualitative factors such as watch lists or financial analysis by experts. Similarly, to the previous case, there is also a second time threshold. In case the repayment of an asset is overdue for more than 30 days and less than 90 days, it is assigned to "Bucket 2". Relative Threshold: if the counterparty has suffered significant deterioration in credit risk, that is if its credit quality since initial recognition has dropped more than a specific pre-defined relative threshold, then it is assigned to "Bucket 2".

Write off loans

The bank takes measurements to write a loan off in three below conditions have been met:

Category 1 - Credit exposures not covered by collateral, either in pledge form or in mortgage form, classified as non-performing exposure shall be written off from the balance sheet within eighteen (18) months of the period when they are classified in this category;

Category 2 - Credit exposures that are covered by pledged collateral classified as non-performing must be written off from the balance sheet within thirty-six (36) months of the period when they were classified non-performing;

Category 3 - Credit exposures that are covered by collateral in the form of mortgages classified non-performing exposure must be written off from the balance sheet within sixty (60) months from the period when they are classified as "non-performing";

Category 4 - Credit exposures that are covered by combined collateral, in pledge form and in mortgage form, in cases where the mortgage covers more than fifty percent (50%) of the exposure at the time of approval, then for the purpose of repayment, the credit exposure be treated according to paragraph 2.3 of this article;

ECL is estimated under Base (typical), Good (favourable) and Bad (unfavourable) conditions.

The only Point-in-Time estimates are for Probability of Default. Workout LGD is used, where the cash flows during the non-performing processes of a product are obtained by being discounted to their amounts on the date of default and EAD uses amortisation type payment schedules. Once all components (PD, EAD, LGD) have been computed, the ECL is estimated under three different scenarios: Base (typical), Good (favourable) and Bad (unfavourable) condition, with weights 40%, 30% and 30% respectively.

(x) Derivative financial instruments and hedge accounting

The Bank applies the new hedge accounting requirements in IFRS 9 prospectively.

Derivative financial instruments are accounted for at fair value through profit and loss (FVTPL) except for derivatives designated as hedging instruments in cash flow hedge relationships, which require a specific accounting treatment. To qualify for hedge accounting, the hedging relationship must meet all of the following requirements:

- There is an economic relationship between the hedged item and the hedging instrument
- The effect of credit risk does not dominate the value changes that result from that economic relationship.

- (e) Financial assets and liabilities (continued)
- (x) Derivative financial instruments and hedge accounting (continued)
- The hedge ratio of the hedging relationship is the same as that resulting from the quantity of the hedged item that the entity actually hedges and the quantity of the hedging instrument that the entity actually uses to hedge that quantity of hedged item.

All derivative financial instruments used for hedge accounting are recognised initially at fair value and reported subsequently at fair value in the statement of financial position. To the extent that the hedge is effective, changes in the fair value of derivatives designated as hedging instruments in cash flow hedges are recognised in other comprehensive income and included within the cash flow hedge reserve in equity. Any ineffectiveness in the hedge relationship is recognised immediately in profit or loss.

At the time the hedged item affects profit or loss, any gain or loss previously recognised in other comprehensive income is reclassified from equity to profit or loss and presented as a reclassification adjustment within other comprehensive income. However, if a non-financial asset or liability is recognised as a result of the hedged transaction, the gains and losses previously recognised in other comprehensive income are included in the initial measurement of the hedged item. If a forecast transaction is no longer expected to occur, any related gain or loss recognised in other comprehensive income is transferred immediately to profit or loss.

If the hedging relationship ceases to meet the effectiveness conditions, hedge accounting is discontinued and the related gain or loss is held in the equity reserve until the forecast transaction occurs.

(f) Cash and cash equivalents

Cash and cash equivalents include notes and coins on hand, unrestricted balances held with central banks and highly liquid financial assets, which are subject to insignificant risk of changes in their fair value, and are used by the Bank in the management of its short-term commitments. Cash and cash equivalents are carried at amortised cost in the statement of financial position.

(g) Derivatives held for risk management purposes

Derivatives held for risk management purposes include all derivative assets and liabilities that are not classified as trading assets or liabilities. Derivatives held for risk management purposes are measured at fair value in the statement of financial position.

(h) Loans

Loans are non-derivative financial assets with fixed or determinable payments that are not quoted in an active market and that the Bank does not intend to sell immediately or in the near term.

When the Bank purchases a financial asset and simultaneously enters into an agreement to resell the asset (or a substantially similar asset) at a fixed price on a future date ("reverse repo"), the arrangement is accounted for as a loan or advance, and the underlying asset is not recognised in the Bank's financial statements.

Loans are initially measured at fair value plus incremental direct transaction costs, and subsequently measured at their amortised cost using the effective interest method, except when the Bank chooses to carry the loans at fair value through profit or loss as described in accounting policy 3(f), (iii).

(i) Property and equipment and intangibles

(i) Recognition and measurement

Items of property and equipment are measured at cost less accumulated depreciation and accumulated impairment losses. Cost includes expenditures that are directly attributable to the acquisition of the asset. When parts of an item of property or equipment have different useful lives, they are accounted for as separate items (major components) of property and equipment.

Notes to the Financial Statements for the year ended 31 December 2024 (Amounts in EUR, unless otherwise stated)

3. Significant accounting policies (continued)

(i) Property and equipment and intangibles (continued)

(ii) Subsequent costs

The cost of replacing a part of an item of property or equipment is recognised in the carrying amount of the item if it is probable that the future economic benefits embodied within the part will flow to the Bank and its cost can be measured reliably. The carrying amount of the replaced part is derecognised. The costs of the day-to-day servicing of property and equipment are recognised in profit or loss as incurred.

(iii) Depreciation

Depreciation is recognised in profit or loss on a straight-line basis over the estimated useful lives of each part of an item of property and equipment. Land is not depreciated.

Leasehold improvements are depreciated over the shorter of the lease term and their useful lives.

The estimated useful lives for the current and comparative periods are as follows:

Lease hold improvements
 Motor vehicles and machinery
 Office furniture
 Computers and electronic equipment
 1 to 10 years
 5 years
 5 years
 5 years

Depreciation methods, useful lives and residual values are reassessed at the reporting dates.

(iv) Intangible assets

Intangible assets are measured initially at cost. Intangible assets are recognized if it is probable that the future economic benefits that are attributable to the asset will flow to the enterprise; and the cost of the asset can be measured reliably. After initial recognition, intangible assets are measured at cost less accumulated amortization and any accumulated impairment losses. Intangible assets are amortized on a straight-line basis over the best estimate of their useful lives, which at 31 December 2023 and 2022 is from 1 to 20 years.

Intangible assets consist of software licences.

(v) Leased property and equipment

For contracts in place, the Bank has elected to apply the definition of a lease from IAS 17 and IFRIC 4 and has not applied IFRS 16 to arrangements that were previously not identified as lease under IAS 17 and IFRIC 4.

At this date, the Bank has also elected to measure the right-of-use assets at an amount equal to the lease liability adjusted for any prepaid or accrued lease payments that existed at the date of transition.

Instead of performing an impairment review on the right-of-use assets at the date of initial application, the Bank has relied on its historic assessment as to whether leases were onerous immediately before the date of initial application of IFRS 16.

For those leases previously classified as finance leases, the right-of-use asset and lease liability are measured at the date of initial application at the same amounts as under IAS 17 immediately before the date of initial application.

Initial direct costs

An entity may exclude initial direct costs from the measurement of the Right of Use asset at the date of initial application.

Based on IFRS 16, if a lessee elects to apply the standard with the modified retrospective application, the lessee shall choose, on a lease-by-lease basis, to measure the right-of-use asset at either:

Option 1 — its carrying amount as if IFRS 16 had been applied since the commencement date, but discounted using the lessee's incremental borrowing rate at the date of initial application. The practical expedient to exclude initial direct costs from the measurement of the Right of Use asset at the date of initial application is applicable under Option 1 or;

Notes to the Financial Statements for the year ended 31 December 2024 (Amounts in EUR, unless otherwise stated)

- 3. Significant accounting policies (continued)
- (i) Property and equipment and intangibles (continued)
- (v) Leased property and equipment (continued)

Initial direct costs (continued)

Option 2 – an amount equal to the lease liability, adjusted by the amount of any prepaid or accrued lease payments relating to that lease. Although it is not stated explicitly in the new standard, the practical expedient on initial direct costs is not relevant under Option 2. The Bank does not adjust the Right of Use asset for historical amounts e.g. initial direct costs.

The Bank has opted to apply the modified retrospective method under Option 2.

Low-value assets

Lessees can also make an election to apply a method similar to current operating lease accounting to leases for which the underlying asset is of low-value. IFRS 16 does not define the term low-value.

Banka Kombëtare Tregtare Kosovë Sh.a uses the EUR 5,000 as a threshold and simultaneously analyses the nature of the asset in order to assess whether a leased asset qualifies for the low-value asset exemption. The types of assets that qualify for the low-value asset exemption might change over time if, due to market developments, the price of a particular type of asset changes.

Incremental Borrowing Rate

The rate used for calculation of the RoU asset and the Lease liability has taken into consideration the term, FX denomination, risk associated with the bank, security, risk associated with the asset and economic environment.

The closest values matching this definition are Funds Transfer Pricing (FTP) rates. The term and FX denomination are taken into consideration when constructing the EUR yield curves. The Bank considered at the initial application date the rates published by 31 December 2018.

After consideration, the Bank determined that there are no differences in terms of security, due to the fact that the lessor effectively has security of owning the asset. Therefore, no adjustments were required. Since the starting point is in the same jurisdiction and in the same currency as leases, no adjustment is required for this segment as well. In addition, for assets such as office buildings and ATM space, considering that they are in a frequented area, are not highly illiquid or specialized assets, specific asset premium would be nil.

The incremental borrowing rate is determined as the base rate yield curve plus the credit spread.

a. Base rate yield curve

Input data in the model are money market rates (inter-bank rates in maturity bucket ON-1Y). These data are published on daily basis in "Reuters" (inter-bank trading platform). For higher maturities, the rate is calculated by extrapolating starting from the money market rates of December 2018.

The Bank uses the Cubic spline interpolation for EUR yield curve construction. Cubic spline interpolation is a special case of spline type interpolation that is used very often to avoid the problem of Runge's phenomenon. This method gives an interpolating polynomial that is smoother and has smaller error than some other interpolating polynomials such as Lagrange polynomial and Newton polynomial. Cubic smoothing splines fitted to univariate time series data can be used to obtain local linear forecasts. The approach is based on a stochastic state space model which allows the use of a likelihood approach for estimating the smoothing parameter, and which enables easy construction of prediction intervals. In essence the same mathematical mechanic is followed by the NSS (Nelson-Siegel-Svensson) model. Whereas an interpolation typically begins with specifying a functional form either to approximate discount function or forward rates, and then estimates the unknown parameters. The cubic spline approach, brings more flexibility on the shape of a yield curve and is thus good for financial practitioners who are looking for small pricing anomalies.

- 3. Significant accounting policies (continued)
- (i) Property and equipment and intangibles (continued)
- (v) Leased property and equipment (continued)
- b. Credit spread

For the credit spread calculations, the Bank has approached the following logic:

- 1) Identify the international long-term Issuer Default Rating of the financial institution ("Bank"). International long-term IDR is given by the External Credit Rating Agency such as Moody's, Fitch or Standard & Poor. The Bank will use only the official, world-wide accepted, external credit rating agencies such as Fitch, Moody's and S&P because only these 3 agencies do the analyses world-wide, make and publish the studies on PDs, LGD's (where credit spread will be determined as PD*LGD) etc. on the global level. These three agencies are also the only ones allowed to be used for the purpose of relying on the expert-data parameters for e.g. in EU (as per CRD/CRR regulation etc.).
- 2) If the financial institution (Bank) does not have such a rating and it is part of a Bank, the lower rating of the country ceiling for the country where Bank is located and the external agency's international long-term Issuer Default Rating of the ultimate parent is used. The underlying reason for this approach is that when a bank is part of a Bank, support is more likely.
- 3) If neither of these steps results in a rating, country ceiling for the country in which Bank is located is identified and at least one notch is subtracted. The country ceiling is the best rating that an entity based in that country can receive, so this is used as a benchmark as we tend to work with the biggest and most robust institutions. Additionally, the downward risk adjustment is made for the sake of prudence.

At initial application date, the credit spread of the Bank is 3.51%. On transition to IFRS 16 the weighted average incremental borrowing rate applied to lease liabilities recognised under IFRS 16 was 2.86%.

The Bank has benefited from the use of hindsight for determining lease term when considering options to extend and terminate leases.

For leases previously classified as operating leases under IAS 17, a lessee recognizes a lease liability measured at the present value of the remaining lease payments, discounted using the lessee's incremental borrowing rate at the date of initial application. The associated right-of-use assets for property leases were measured on a retrospective basis as if the new rules had always been applied. Other right-of use assets were measured at the amount equal to the lease liability, adjusted by the amount of any prepaid or accrued lease payments relating to that lease recognised in the balance sheet as at 31 December 2023.

(j) Assets acquired through legal process (repossessed collateral)

Repossessed collateral represents financial and non-financial assets acquired by the Bank in settlement of overdue loans. The assets are initially recognized at fair value when acquired and included in premises and equipment, other financial assets, investment properties or inventories within other assets depending on their nature and the Bank's intention in respect of recovery of these assets and are subsequently remeasured and accounted for in accordance with the accounting policies for these categories of assets. The Bank applies its accounting policy for non-current assets held for sale or disposal groups to repossessed collateral where the relevant conditions for such classification are met at the end of the reporting period.

Collaterals repossessed by the Bank represent the repossessed collaterals of some unrecoverable loans, the ownership of which was taken by the Bank. The Bank has established an Asset Sale Committee, responsible for the disposal of these assets. These assets are accounted for as foreclosed assets. The fair value of these assets at the reporting date is determined with reference to the current market prices. For the cases that the collateral has been re-possessed before making the write off, the remaining exposure will be written off by CRD. These cases will be part of regular reporting to Risk Management Committee and Board of Directors.

(k) Impairment of non-financial assets

The carrying amounts of the Bank's non-financial assets, other than deferred tax assets, are reviewed at each reporting date to determine whether there is any indication of impairment. If any such indication exists then the asset's recoverable amount is estimated.

An impairment loss is recognized if the carrying amount of an asset or its cash-generating unit exceeds its recoverable amount. A cash-generating unit is the smallest identifiable asset group that generates cash flows that largely are independent from other assets and groups. Impairment losses are recognized in profit or loss. Impairment losses recognized in respect of cash-generating units are allocated first to reduce the carrying amount of any goodwill allocated to the units and then to reduce the carrying amount of the other assets in the unit (group of units) on a pro rata basis. The recoverable amount of an asset or cash-generating unit is the greater of its value in use and its fair value less costs to sell. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. Impairment losses recognized in prior periods are assessed at each reporting date for any indications that the loss has decreased or no longer exists.

An impairment loss is reversed if there has been a change in the estimates used to determine the recoverable amount. An impairment loss is reversed only to the extent that the asset's carrying amount does not exceed the carrying amount that would have been determined, net of depreciation or amortization, if no impairment loss had been recognized.

(l) Deposits and borrowings

Deposits and borrowings are part of the Bank's sources of funding. When the Bank sells a financial asset and simultaneously enters into an agreement to repurchase the asset (or a similar asset) at a fixed price on a future date ("repo" or "stock lending"), the arrangement is accounted for as a deposit, and the underlying asset continues to be recognised in the Bank's financial statements. Deposits and borrowings are initially measured at fair value net of directly attributable transaction costs, and subsequently measured at their amortised cost using the effective interest method.

(m) Provisions

A provision is recognised if, as a result of a past event, the Bank has a present legal or constructive obligation that can be estimated reliably, and it is probable that an outflow of economic benefits will be required to settle the obligation. Provisions are determined by discounting the expected future cash flows at a pre-tax rate that reflects current market assessments of the time value of money and, where appropriate, the risks specific to the liability.

A provision for restructuring is recognised when the Bank has approved a detailed and formal restructuring plan, and the restructuring either has commenced or has been announced publicly. Future operating costs are not provided for. A provision for onerous contracts is recognised when the expected benefits to be derived by the Bank from a contract are lower than the unavoidable cost of meeting its obligations under the contract. The provision is measured at the present value of the lower of the expected cost of terminating the contract and the expected net cost of continuing with the contract. Before a provision is established, the Bank recognises any impairment loss on the assets associated with that contract.

ECL is estimated under Baseline (typical), Best (favourable) and Adverse (unfavourable) conditions.

The only Point-in-Time estimates are for Probability of Default. LGD assumes Basel estimates and EAD uses amortisation type payment schedules. Once all components (PD, EAD, LGD) have been computed, the ECL is estimated under three different scenarios: Baseline (typical), Best (favourable) and Adverse (unfavourable) condition, with weights 52%, 30% and 18% respectively.

(n) Financial guarantees and loan commitments

The Bank's liability under each commitment is measured at the higher of the amount initially recognized minus the cumulative depreciation recognized in the income statement, and the provision measured by HPK. To this end, the Bank assesses HPKs based on the present value of the expected payments to reimburse the holder for a credit loss it causes. Deficiencies are deducted from an interest rate adjustment adjusted by the risk associated with the exposure. HPKs related to financial guarantee contracts are recognized within the provisions. Financial guarantees are contracts that oblige the Bank to make specific payments to reimburse the holder for a loss that arises when a specific debtor fails to pay on time under the terms of a lending instrument. Loan commitments are defined commitments to secure loans under pre-defined terms and conditions. Such financial commitments are recorded in the statement of financial position, if and when they become payable.

(o) Dividends

Dividend is declared at the General Meeting of Shareholders, based on the recommendation of the Board of Directors. The shareholders can decide on any dividend amount, within the range of payable dividend proposed by the Board of Directors.

The decision regarding dividend shall be taken only by the General Meeting of Shareholders and not by a Committee of the Board or by any way of a Resolution passed by circulation.

Final dividend shall be paid only after approval at the General Meeting of Shareholders of the Bank.

Dividends shall be distributed proportionately to the par value of shares, unless the Articles of Association of the Bank provides otherwise.

(p) Employee benefits

(i) Defined contribution plans

Obligations for contributions to defined contribution pension plans are recognised as an expense in profit or loss when they are due. The Bank makes compulsory social security contributions that provide pension benefits for employees upon retirement. The local authorities are responsible for providing the legally set minimum threshold for pensions in Kosova under a defined contribution pension plan.

(p) Employee benefits (continued)

i. Short-term benefits

Short-term employee benefit obligations are measured on an undiscounted basis and are expensed as the related service is provided. A provision is recognised for the amount expected to be paid under short-term cash bonus or profit-sharing plans if the Bank has a present legal or constructive obligation to pay this amount as a result of past service provided by the employee and the obligation can be estimated reliably.

3.1 Standards and Interpretations effective in the current period

There are no accounting announcements which have become effective from 01 January 2024 that have a significant impact on the Bank's financial statements.

Other Standards and amendments that are effective for the first time in 2024 and could be applicable to the entity are:

- Lease Liability in a Sale and Leaseback: Amendments to IFRS 16 Leases
- Classification of Liabilities as Current or Non-Current: Amendments to IAS 1 Presentation of Financial StatementsIFRS for Small and Medium-sized Entities (IFRS for SMEs)

These amendments do not have a significant impact on these Financial Statements and therefore the disclosures have not been made.

3.2 Standards and interpretations issued but not yet adopted.

The International Board of Accounting Standards has issued a number of standards and interpretations that are effective in future accounting periods, which the company has decided not to apply in advance. The company plans to apply these standards and interpretations when they become effective.

The following standards and interpretations have been issued but are not mandatory for the current reporting period ended 31 December 2024:

- IAS 21 Lack of Exchangeability (effective for annual periods beginning on or after 1 January 2025)
- IFRS 9 and IFRS 7- Amendments to the Classification and Measurement of Financial Instruments (effective for annual periods beginning on or after 1 January 2026)
- IFRS 18: A new presentation standard replacing IAS 1, effective from January 1, 2025.
- IFRS 19: An optional standard allowing certain entities to reduce required disclosures, effective from January 1, 2025.

None of these Standards or amendments to existing Standards have been adopted early by the Bank. Management anticipates that all relevant pronouncements will be adopted for the first period beginning on or after the effective date of the pronouncement. New Standards, amendments and Interpretations not adopted in the current year have not been disclosed as they are not expected to have a material impact on the Bank's financial statements.

4. Use of estimates and judgements

Management discusses with the Audit Committee the development, selection and disclosure of the Bank's critical accounting policies and estimates, and the application of these policies and estimates.

These disclosures supplement the commentary on financial risk management (see note 5).

The following are the critical judgements, apart from those involving estimations (which are dealt with separately below), that the management has made in the process of applying the Bank's accounting policies and that have the most significant effect on the amounts recognised in financial statements:

Business model assessment: Classification and measurement of financial assets depends on the results of the SPPI and the business model test (note 3, (f), (iii)). The Bank determines the business model at a level that reflects how groups of financial assets are managed together to achieve a particular business objective. This assessment includes judgement reflecting all relevant evidence including how the performance of the assets is evaluated and their performance measured, the risks that affect the performance of the assets and how these are managed and how the managers of the assets are compensated. The Bank monitors financial assets measured at amortized cost or fair value through other comprehensive income that are derecognized prior to their maturity to understand the reason for their disposal and whether the reasons are consistent with the objective of the business for which the asset was held. Monitoring is part of the Bank's continuous assessment of whether the business model for which the remaining financial assets are held continues to be appropriate and if it is not appropriate whether there has been a change in business model and so a prospective change to the classification of those assets.

ECL Determination

Significant increase of credit risk: As explained in note 3 (f) (viii) and 5 (b) (ii), ECL are measured as an allowance equal to 12-month ECL for stage 1 assets, or lifetime ECL assets for stage 2 or stage 3 assets. An asset moves to stage 2 when its credit risk has increased significantly since initial recognition. IFRS 9 does not define what constitutes a significant increase in credit risk. In assessing whether the credit risk of an asset has significantly increased the Bank considers qualitative and quantitative reasonable and supportable forward-looking information.

Establishing groups of assets with similar credit risk characteristics: When ECLs are measured on a collective basis, the financial instruments are grouped on the basis of shared risk characteristics. The Bank monitors the appropriateness of the credit risk characteristics on an ongoing basis to assess whether they continue to be similar. This is required in order to ensure that should credit risk characteristics change there is appropriate resegmentation of the assets. This may result in new portfolios being created or assets moving to an existing portfolio that better reflects the similar credit risk characteristics of that group of assets. Re-segmentation of portfolios and movement between portfolios is more common when there is a significant increase in credit risk (or when that significant increase reverses) and so assets move from 12-month to lifetime ECLs, or vice versa but it can also occur within portfolios that continue to be measured on the same basis of 12-month or lifetime ECLs but the amount of ECL changes because the credit risk of the portfolios differ.

Models and assumptions used: The Bank uses various models and assumptions in measuring fair value of financial assets as well as in estimating ECL. Judgement is applied in identifying the most appropriate model for each type of asset, as well as for determining the assumptions used in these models, including assumptions that relate to key drivers of credit risk. See note 3 (f) (viii) and 5 (b) (ii), for more details on ECL and note 3 (f) (vii) for more details on fair value measurement.

(Amounts in EUR, unless otherwise stated)

4. Use of estimates and judgements (continued)

Determining fair values

The determination of fair value for financial assets and liabilities for which there is no observable market price requires the use of valuation techniques as described in accounting policy 3 (f) (vii). For financial instruments that trade infrequently and have little price transparency, fair value is less objective, and requires varying degrees of judgment depending on liquidity, concentration, uncertainty of market factors, pricing assumptions and other risks affecting the specific instrument. See also "Valuation of financial instruments" below.

Critical accounting judgments made in applying the Bank's accounting policies include:

Valuation of financial instruments

The Bank's accounting policy on fair value measurements is discussed under note 3 (f) (vii).

The Bank measures fair values using the following hierarchy of methods:

- Level 1: Quoted market price in an active market for an identical instrument.
- Level 2: Valuation techniques based on observable inputs. This category includes instruments valued using:
 quoted market prices in active markets for similar instruments; quoted prices for similar instruments in
 markets that are considered less than active; or other valuation techniques where all significant inputs are
 directly or indirectly observable from market data.
- Level 3: Valuation techniques using significant unobservable inputs. This category includes all instruments
 where the valuation technique includes inputs not based on observable data and the unobservable inputs
 could have a significant effect on the instrument's valuation. This category includes instruments that are
 valued based on quoted prices for similar instruments where significant unobservable adjustments or
 assumptions are required to reflect differences between the instruments.

Fair values of financial assets and financial liabilities that are traded in active markets are based on quoted market prices or dealer price quotations. For all other financial instruments, the Bank determines fair values using valuation techniques. Valuation techniques include net present value and discounted cash flow models, comparison to similar instruments for which market observable prices exist and other valuation models. The objective of valuation techniques is to arrive at a fair value determination that reflects the price of the financial instrument at the reporting date that would have been determined by market participants acting at arm's length.

The Bank uses widely recognized valuation models for determining the fair value of common and more simple financial instruments, like interest rate and currency swaps that use only observable market data and require little management judgment and estimation. Observable prices and model inputs are usually available in the market for listed debt and equity securities, exchange traded derivatives and simple over the counter derivatives like interest rate swaps. Availability of observable market prices and model inputs reduces the need for management judgment and estimation and also reduces the uncertainty associated with determination of fair values. Availability of observable market prices and inputs varies depending on the products and markets and is prone to changes based on specific events and general conditions in the financial markets.

For more complex instruments, the Bank uses proprietary valuation models, which usually are developed from recognized valuation models. Some or all of the significant inputs into these models may not be observable in the market, and are derived from market prices or rates or are estimated based on assumptions. Valuation models that employ significant unobservable inputs require a higher degree of management judgment and estimation in determination of fair value. Management judgment and estimation are usually required for selection of the appropriate valuation model to be used, determination of expected future cash flows on the financial instrument being valued, determination of probability of counterparty default and prepayments and selection of appropriate discount rates.

4. Use of estimates and judgements (continued)

Fair values

The table below sets out the carrying amounts and fair values of the financial assets and liabilities by the level in the fair value hierarchy into which the fair value measurement is categorised:

31-Dec-24		Fair Value				
	Note	Carrying Amount	Level 1	Level 2	Level 3	Total

5. Financial risk management

(a) Introduction and overview

The Bank has exposure to the following risks from financial instruments:

- credit risk
- liquidity risk
- market risks
- operational risks

This note presents information about the Bank's exposure to each of the above risks, the Bank's objectives, policies and processes for measuring and managing risk, and the Bank's management of capital.

A financial instrument is any contract that gives rise to the right to receive cash or another financial asset from another party (financial asset) or the obligation to deliver cash or another financial asset to another party (financial liability).

Financial instruments result in certain risks to the Bank. The most significant risks facing the Bank are credit risk, liquidity risk and market risk. Market risk includes foreign currency risk, interest rate risk and other price risks.

Risk management framework

The Board of Directors has overall responsibility for the establishment and oversight of the Bank's risk management framework. The Board has established the Bank Asset and Liability Committee (ALCO), Risk Management Group and Credit Committees, which are responsible for developing and monitoring Bank risk management policies in their specified areas. All these bodies report regularly to the Board of Directors on their activities.

The Bank's risk management policies are established to identify and analyse the risks faced by the Bank, to set appropriate risk limits and controls, and to monitor risks and adherence to limits. Risk management policies and systems are reviewed regularly to reflect changes in market conditions, products and services offered. The Bank, through its training and management standards and procedures, aims to develop a disciplined and constructive control environment, in which all employees understand their roles and obligations.

The Bank Audit Committee is responsible for monitoring compliance with the Bank's risk management policies and procedures, and for reviewing the adequacy of the risk management framework in relation to the risks faced by the Bank. The Bank Audit Committee is assisted in these functions by Internal Audit. Internal Audit undertakes both regular and ad-hoc reviews of risk management controls and procedures, the results of which are reported to the Audit Committee

(b) Credit Risk

Credit risk is the risk of financial loss to the Bank if a customer or counterparty to a financial instrument fails to meet its contractual obligations, and arises principally from the Bank's Loans to customers and other banks and investment securities. For risk management reporting purposes, the Bank considers all elements of credit risk exposure (such as individual obligor default risk, country and sector risk). BKT Kosova has formed a Credit Committee to oversee the approval of requests for credits up to the limit of 500,000 EUR. Credit requests with amounts over EUR 500,000 up to EUR 1,000,000 are approved by only two Board Members, while credit requests with amount over EUR 1,000,000 are approved only upon decision of the Board of Directors (all members). There is a continuous focus on the quality of credits extended both at the time of approval and throughout their lives.

Each business unit is required to comply with Bank credit policies and procedures. Regular audits of business units and Credit Risk Management processes are undertaken by Internal Audit.

Notes to the Financial Statements for the year ended 31 December 2024 (Amounts in EUR, unless otherwise stated)

5. Financial risk management (continued)

(b) Credit Risk (continued)

i. Maximum credit exposure

The gross carrying amount of financial assets below also represents the Bank's maximum exposure to credit risk on these assets. Maximum exposures to credit risk before collateral and other credit enhancements as at 31 December 2024 and 31 December 2023 are as follows:

Financial Instruments Credit Risk		31-Dec-24				31-Dec-23	
	Note	Exposure before impairment	Impairment	Net exposure for credit risk	Exposure before impairment	Impairment	Net exposure for credit risk
A. Credit risk exposure relating to balance sheet items							
Cash and Cash Balances with Central Banks		182,724,547	-	182,724,547	153,388,635	-	153,388,635
Placements and Balances with the Banks		135,843,809	(12,052)	135,831,757	117,771,578	(7,747)	117,763,831
Investment securities - measured at FVOCI		174,118,167	-	174,118,167	146,402,957	-	146,402,957
Investment securities - measured at amortised cost		65,201,610	(44,701)	65,156,909	83,523,043	(1,560,251)	81,962,792
Loans to customers		788,312,589	(11,117,049)	777,195,540	619,061,640	(12,273,305)	606,788,335

Total credit risk exposure	_	3,489,206,696	(14,308,181)	3,474,898,516	2,717,237,506	(16,057,975)	2,701,179,531

Notes to the Financial Statements for the year ended 31 December 2024 (Amounts in EUR, unless otherwise stated)

5. Financial risk management (continued)

(b) Credit Risk (continued)

ii. Expected credit loss measurement

The estimation of credit exposure for risk management purposes is complex and requires the use of models, as the exposure varies with changes in market conditions, expected cash flows and the passage of time. The assessment of credit risk of a portfolio of assets entails further estimations as to the likelihood of defaults occurring, of the associated loss ratios and of default correlations between counterparties. The Bank measures credit risk using Probability of Default (PD), Exposure at Default (EAD) and Loss Given Default (LGD).

The guiding principle of the expected credit loss model is to reflect the general pattern of deterioration or improvement in the credit quality of financial instruments. This credit quality depends on the extent of credit deterioration since initial recognition and will spread over three stages:

"Stage 1" comprises of assets that have not suffered any significant deterioration of credit quality since initial recognition;

"Stage 2" comprises of assets that have suffered significant deterioration since initial recognition;

"Stage 3" concerns all assets where a default has occurred.

Under this general approach, the ECL for an asset is calculated over different time horizons according to the stage it was assigned to:

ECL over one year for assets in stage 1;

ECL over remaining lifetime for assets in stage 2 and stage 3.

The stage assignment is done according to the following rules:

Impairment: if the counterparty for the considered asset has defaulted, the asset is assigned to "Stage 3". An asset is considered as having defaulted if any repayment (principal or interest) is overdue for more than 90 days or if the counterparty is in a proven situation of default (bankruptcy).

Qualitative factors: IFRS 9 has advised to consider qualitative factors such as watch lists or financial analysis by experts. Similarly, to the previous case, there is also a second time threshold. In case the repayment of an asset is overdue for more than 30 days and less than 90 days, it is assigned to "Stage 2".

Relative Threshold: if the counterparty has suffered significant deterioration in credit risk, that is if its credit quality since initial recognition has dropped more than a specific pre-defined relative threshold, then it is assigned to "Stage 2".

All assets that are not in the previous cases are assigned to "Stage 1".

Grouping of instruments for losses measured on a collective basis

For expected credit loss provisions modelled on a collective basis, a grouping of exposures is performed on the basis of shared risk characteristics, such that risk exposures within a group are homogeneous.

In performing this grouping, there must be sufficient information for the group to be statistically credible.

Where sufficient information is not available internally, the Bank has considered benchmarking internal/external supplementary data to use for modelling purposes.

The Bank has three main portfolios, which are:

Loan portfolio

This category includes wholesale and individual/retail accounts loans.

Treasury portfolio

This category includes bonds, treasury bills and equity accounts.

Project and Structured Finance

This category includes letters of credit and bank guarantees.

Notes to the Financial Statements for the year ended 31 December 2024 (Amounts in EUR, unless otherwise stated)

5. Financial risk management (continued)

(b) Credit Risk (continued)

ii. Expected credit loss measurement (continued)

Significant Deterioration through relative threshold

The bank computes a relative threshold matrix that gives for each rating a prediction of what the expected rating for each time horizon should be.

Through-the-cycle (TTC) transition matrices give the percentage of counterparties which moved from one rating to another over a specific time interval. TTC matrices over a 10-year horizon are taken since this gives a comfortable horizon for a relative threshold.

Credit risk grading

The bank first relied on proxies provided by external credit rating agencies. Since then, an internal credit rating for non-retail clients has been developed and used for PD estimation.

From there, a TTC transition matrix with the number of observations (number of entities that changed from one specific rating to another) is used and a weighted average per mapped rating is computed in order to compute the internal ratings TTC matrix.

Forward-looking information incorporated in the ECL models

The TTC PDs are transformed into PIT PDs by taking into account the macroeconomic environment through a set of macroeconomic variables: real GDP growth rate, inflation rate and unemployment rate. These variables were sourced from the IMF, including historical data spanning 2011–2021 and baseline projections for 2022 – 2028. In addition to economic PD and models, a set of fundamental macroeconomic variables related to the borrower's repayment capacity is considered, in accordance with the requirements of IFRS 9, to develop the forward-looking macro-corrected lifetime PD. The variables are linked to the real economy, nominal economy, and credit developments in Kosovo. This annual in-sample data has been converted to monthly data using the Denton-Cholette method, which is a statistical technique used to disaggregate lower frequency data (such as yearly data) into higher frequency data (such as monthly data) while maintaining the overall structure and properties of the original series. However, the forecast of Unemployment variable was not available; therefore, it has been generated using the VAR (Vector Autoregression) method for years between 2022 and 2028 using its monthly data which again generated via the Denton Cholette method.

In the macroeconomic modeling process, there are two main segments: Retail and Commercial. Using the resulting FLI values of these main segments, the PD values for the subsegments are created.

The Migration Matrix method is used for Lifetime PD calculations on a segment basis, which are created by calculating the change of a customer in the PD pool from a year ago.

The weight of each pool in the migration matrices is calculated by weighting with the risk balance in each pool change.

The method used in calibration consists of 5 steps:

The resulting forecasted default rates for Base, Good and Bad scenarios from macroeconomic models are used for the calculation of transition matrices. In Step 1, migration matrices are calculated to match the estimated portfolio-level PD. This is done by incorporating the macro model's PD estimates and constructing migration matrices based on the change of a customer in the PD pool from a year ago.

In Step 2, the weight of each pool in the migration matrices is calculated by weighting with the risk balance in each pool change. This is done to ensure that the migration matrices accurately represent the risk dynamics within the portfolio. Each pool's transitions are weighted based on their risk balance, which reflected the distribution of credit risk across the different pools.

In Step 3, adjusted matrices are generated to align with the macroeconomic model's PD estimates. This adjustment is done to ensure that the matrices reflect expected future economic conditions and the corresponding impact on loan portfolio behavior. The adjustment process involves fine-tuning the transition probabilities in the migration matrices so that they match the macro model's PD estimates.

In Step 4, the adjusted matrices are used to obtain the forward-looking PD for each pool. This involved applying the adjusted migration probabilities to the current distribution of customers across the PD pools to estimate their future distribution. This step ensured that the PD projections for each pool incorporate the adjusted matrices, providing a forward-looking view of customer risk.

Notes to the Financial Statements for the year ended 31 December 2024 (Amounts in EUR, unless otherwise stated)

- 5. Financial risk management (continued)
- (b) Credit Risk (continued)
- ii. Expected credit loss measurement (continued)

In Step 5, The 12-month PD at the pool level for the remaining years is generated over the lifetime of the portfolio using the adjusted migration matrices. This involves simulating customer movements through the PD pools year by year, projecting their likely future states with the adjusted matrices. Lifetime PD estimates for each customer segment are generated, reflecting the expected credit risk over the entire duration of the portfolio.

Measuring ECL – Explanation of inputs, assumptions and estimation techniques

The key inputs into the measurement of ECLs are likely to be the term structures of the following variables:

- 1. Probability of default (PD);
- 2. Loss given default (LGD); and
- 3. Exposure at default (EAD).

ECL is estimated under Baseline (typical), Best (favourable) and Adverse (unfavourable) conditions.

The only Point-in-Time estimates are for Probability of Default. LGD is modelled as described below and EAD uses amortization type payment schedules. Once all components (PD, EAD, LGD) have been computed, the ECL is estimated under three different scenarios: Base (typical), Good(favourable) and Bad(unfavourable) condition, with weights 40%, 30% and 30% respectively, please refer note 3, n) provisions. The final ECL is the probability-weighted ECL under those three scenarios.

Notes to the Financial Statements for the year ended 31 December 2024 (Amounts in EUR, unless otherwise stated)

5. Financial risk management (continued)

(b) Credit Risk (continued)

ii. Expected credit loss measurement (continued)

1. Probability of Default

Probability of default (PD) is the likelihood of a default over a particular time horizon. It provides an estimate of the likelihood that a borrower will be unable to meet its debt obligations. PD is defined as a product of the expected loss and IFRS9. For assets, which are in stage 1, a 12-month PD is used. For stage 2 assets, a lifetime PD is required for which a PD term is built. The PD estimates were developed using segmentation approach. The objective of the segmentation is to identify pools of accounts with similar drivers of PD. The approach taken to design the PD Pools is CART (Classification and Regression Tree). CART is a tree-based exploratory method used to study the relationship between a dependent variable and a series of predictors. The portfolio is split into two segments – retail and non-retail. For the retail segment the PD model is using a segmentation with decision trees, while for the non-retail portfolio the bank will be using internal rating. The PD is then adjusted to PiT PD using a transition matrix and macroeconomic factors.

2. Loss Given Default (LGD)

Loss Given Default is defined as the percentage of the Exposure at Default (EAD) that is ultimately lost in case of default of a counterparty, after all possible recoveries through selling of collateral or collection procedures. Complete and incomplete workouts must be considered in the modeling. The estimation is done first for complete cases where the final loss is observable based on the end date of the default event. The incomplete cases are integrated as well, the estimation for them is done based on all transactions until the end of available history. The average of complete and incomplete cases produces the expected loss LGD. Loss Given Default (LGD) is the loss ratio on a credit instrument occurring after the borrower defaults and calculated as the percentage of exposure at default which the bank does not expect to recover.

Workout LGD is used, where the cash flows during the non-performing processes of a product/ loan are obtained by being discounted to their amounts on the date of default.

Cash flows (recoveries & costs) occurring between the default start date and the default end date has to be discounted to the default starting point. The LGD is then calculated as the portion of EAD not recovered during the process

3. Exposure at Default (EAD)

EAD modeling is an attempt to predict the exposure of a credit obligation at the default moment expected within the next 12 months. EAD is a parameter to be used in the calculation of expected loss and in regulatory capital requirement. The 12-month performance of the customers reflects the default probability, and the EAD is the expected balance of the customer at default time. Therefore, from observation point to the default point in EAD must be between 1 and 12 months. Risk/limit information is used from all months prior to default. The conversion factor is calculated as average over 12 months.

An asset can have a customised, linear or bullet amortisation type. For assets with a customised amortisation type, repayment schedules are used to estimate EAD. For assets without any amortisation type, a linear repayment plan is assumed.

Notes to the Financial Statements for the year ended 31 December 2024 (Amounts in EUR, unless otherwise stated)

Loans with renegotiated terms

Loans with renegotiated terms are loans that have been restructured due to deterioration in the borrower's financial position and where the Bank has made concessions that it would not otherwise consider. Once the loan is restructured, its performance is closely monitored for the purpose of impairment testing. Set out below are the carrying amounts of loans to customers whose term have been renegotiated and are under monitoring:

FORBORNE LOANS TO CUSTOMERS ACCORDING TO THEIR CREDIT QUALITY AT AMORTISED COST

iv. Credit Collateral and other credit enhancement

The Bank employs a range of policies and practices to mitigate credit risk. The most common of these is accepting collateral for funds advanced. The Bank has internal policies on the acceptability of specific classes of collateral or credit risk mitigation.

The Bank prepares a valuation of the collateral obtained as part of the loan origination process. This assessment is reviewed periodically.

The Bank prepares a valuation of the collateral obtained as part of the loan origination process. This assessment is reviewed periodically. The principal collateral types for loans and advances are:

- Mortgages over residential properties;
- Financial Assets
- Charges over business assets such as premises, machineries, and accounts receivable;

Longer-term finance and lending to corporate entities are generally secured; revolving individual credit facilities are generally unsecured.

Collateral held as security for financial assets other than loans and advances depends on the nature of the instrument. Debt securities, treasury and other eligible bills are generally unsecured, with the exception of asset-backed securities and similar instruments, which are secured by portfolios of financial instruments.

The Bank's policies regarding obtaining collateral have not significantly changed during the reporting period and there has been no significant change in the overall quality of the collateral held by the Bank since the prior period.

Set out below is an analysis of collateral and credit enhancement obtained during the years:

Impaired loans and securities

Impaired loans and securities are loans and securities for which the Bank determines that it is probable that it will be unable to collect all principal and interest due according to the contractual terms of the loan / securities agreement(s). The Risk Committee of BKT is engaged with the grading of the customers and their scoring according to the appropriate categories. It decides the changes of grading and takes the necessary actions according to the monitoring procedures. The Risk Committee grades each loan according to these factors:

- Ability to Pay
- Financial Condition
- Management ability
- Collateral and Guarantors
- Loan Structure
- Industry and Economics

Past due but not impaired loans

Past due but not impaired loans are those loans and securities, where contractual interest or principal payments are past due, but the Bank believes that impairment is not appropriate on the basis of the level of security / collateral available and / or the stage of collection of amounts owed to the Bank.

Allowances for impairment

The Bank establishes an allowance for impairment losses that represents its estimate of incurred losses in its loan portfolio and other financial assets. It relates to the specific loss component for individually significant exposures.

Write-off policy

The Bank writes off a loan / security balance (and any related allowances for impairment losses) with the decision of the Board of Directors, in accordance with the regulation of Central Bank of Kosova "On Credit Risk Management". The write-off decision is taken after considering information such as the occurrence of significant changes in the borrower / issuer's financial position, such that the borrower / issuer can no longer pay the obligation, or that proceeds from collateral will not be sufficient to pay back the entire exposure.

Explanatory notes as of and for the period ended 31 December 2024 (amounts in EUR, unless otherwise stated)

5. Financial risk management (continued)

(c) Liquidity risk

Liquidity risk is the risk that the Bank will encounter difficulty in meeting obligations associated with its financial liabilities that are settled by delivering cash or another financial asset. The purpose of Liquidity Risk Management (LRM) is to ensure, as far as possible, that it will always have sufficient liquidity to meet its liabilities when due, under both normal and stressed conditions, without incurring unacceptable losses or risking damage to the Bank's reputation. Bank's LRM policy includes how the Bank identifies, measures, monitors and control that risk.

Organization of LRM: Bank's LRM Organization includes two different bodies in the monitoring and management of liquidity. The involvement of different bodies helps provide clear allocation of the responsibility for monitoring/reporting and management of Liquidity Risk. Day-to-day management of liquidity belongs to the Treasury and FI Group but day-to-day monitoring of Liquidity risk and compliance to the limits belongs to the Risk Management Group. The main purpose of the Risk Management Group, which conducts daily overview of LRM reports, is to provide an early warning signal of liquidity risk to the senior management of the Bank.

LRM Reports: Bank's LRM policy includes sets of daily and monthly reports to be reviewed and monitored by Liquidity and Market Risk Department. Daily reports include Maximum Cumulative Outflow table and Cumulative Assets and Liabilities Breakdown table, which control respectively daily and monthly inflows/outflows of liquidity till 1-year maturity under "business as usual" scenario. Monthly reports include stress testing liquidity breakdown tables, which control daily and monthly inflows/ outflows of liquidity under separate bank specific and market specific crisis scenarios till 3-months maturity.

Managing liquidity risk is an integral part of BKT business operation. Therefore, liquidity adequacy is ensured from both perspectives internal and a regulatory perspective. Respectively, beside regulatory limits defined by Central Bank of the Republic of Kosovo the bank has established a framework with internal limits and steering measures.

Liquidity risk is monitored, analyzed and forecasted continuously, using different time horizons, to ensure that the Bank has adequate cash or cash-equivalents to meet its obligations in a timely manner, without incurring substantially higher costs. Worth to emphasize that regulatory ratios are monitored based on specifications given by the regulations, meanwhile the internal liquidity analyses and limits are monitored biased on modelled assumptions from Market and Liquidity Risk Department (MLRD).

5. Financial risk management (continued)

(d) Market risk

i) Foreign currency risk

Foreign currency risk is the risk that the value of assets and liabilities will fluctuate due to changes in foreign exchange rates. The Bank manages this risk by establishing and monitoring limits on open positions and also ensuring that these positions remain in compliance with the Central Bank of Republic of Kosova guidelines and Bank's internal operational covenants. The Bank has in place procedures for the independent checking of open foreign currency positions. The Treasury and FI Group manages the foreign currency positions and balances the currency spread of the Bank on an ongoing basis. The following tables present the equivalent amount of assets, liabilities and shareholder's equity by currency as at 31 December 2024 and 2023:

5. Financial risk management (continued)

(d) Market risk

i) Foreign currency risk

Foreign currency risk is the risk that the value of assets and liabilities will fluctuate due to changes in foreign exchange rates. The Bank manages this risk by establishing and monitoring limits on open positions and also ensuring that these positions remain in compliance with the Central Bank of Republic of Kosova guidelines and Bank's internal operational covenants. The Bank has in place procedures for the independent checking of open foreign currency positions. The Treasury and FI Group manages the foreign currency positions and balances the currency spread of the Bank on an ongoing basis. The following tables present the equivalent amount of assets, liabilities and shareholder's equity by currency as at 31 December 2024 and 2023:

2023	EUR	ALL	USD	GBP	CHF	Other	Total

5. Financial risk management (continued)

(d) Market risk (continued)

1) Foreign currency risk (continued)

The following table shows the sensitivity of the Bank for foreign currency risk. The sensitivity analysis includes only the monetary items denominated in foreign currency at the end of the year, thus making adjustment of their value when the exchange rate of the foreign currencies is changed by 1% and/or 5%. Adverse amount below marks a decrease of the profit or loss which appears in case the EUR increases its value compared to the foreign currencies by 1% and/or 5%. When the value of the EUR compared to foreign currencies decreases by 1% and/or 5%, the effect on the profit or loss is equal but with reverse index as showed in the table below:

in EUR	Change in 2024	Profit or loss 2024
ALL	5%	898
USD	5%	885,710
GBP	1%	2,476
CHF	5%	900,750
Other	5%	28,197

in EUR ALL	Change in 2023 5%	Profit or loss 2023 874
ALL	5%	874
ALL USD	5% 5%	874 1,039,796

5. Financial risk management (continued)

(d) Market risk (continued)

ii) Interest rate risk

Interest rate risk is the risk that the value of financial instruments will fluctuate due to changes in market interest rates. The Treasury Department in Head Office manages the interest rate risk through monitoring the market conditions and taking necessary re-pricing or reallocation decisions with the approval of the Asset and Liability Committee in Head Office. The sensitivity analysis has been determined based on the exposure to interest rates for both financial assets and financial liabilities assuming that their amounts outstanding at the reporting date were outstanding for the whole year.

An analysis of the Bank's sensitivity to an increase or decrease in market interest rates (assuming no asymmetrical movement in yield curves and a constant statement of financial position) is as follows:

2024	up to 1	Year scenarios	ove	r 1 Year scenarios
	100 bp	100 bp	100 bp	100 bp
	Decrease	Increase	Increase	Decrease
Estimated Profit (loss) effect	(2,517,710)	2,517,710	4,852,289	(4,852,289)

2023	up to 1 Year scenarios			over 1 Year scenarios	
	100 bp	100 bp	100 bp	100 bp	
	Decrease	Increase	Increase	Decrease	
Estimated Profit (loss) effect	(2,517,710)	2,517,710	4,852,289	(4,852,289)	

Explanatory notes as of and for the period ended 31 December 2024 (amounts in EUR, unless otherwise stated)

5. Financial risk management (continued)

(e) Operational risks

Operational risk is the risk of direct or indirect loss arising from a wide variety of causes associated with the Bank's processes, personnel, technology and infrastructure, and from external factors other than credit, market and liquidity risks such as those arising from legal and regulatory requirements and generally accepted standards of corporate behaviour. Operational risks arise from all of the Bank's operations. The Bank's objective is to manage operational risk so as to balance the avoidance of financial losses and damage to the Bank's reputation with overall cost effectiveness and to avoid control procedures that restrict initiative and creativity. The implementation of controls to address operational risk is supported by the development of overall standards for the management of operational risk and carried out with collaboration with Head Office.

The Bank's objective is to manage operational risk so as to balance the avoidance of financial losses and damage to the Bank's reputation with overall cost effectiveness and to avoid control procedures that restrict initiative and creativity.

The implementation of controls to address operational risk is supported by the development of overall standards for the management of operational risk in the following areas:

- requirements for appropriate segregation of duties, including the independent authorisation of transactions
- requirements for the reconciliation and monitoring of transactions
- compliance with regulatory and other legal requirements
- documentation of controls and procedures
- requirements for the periodic assessment of operational risks faced, and the adequacy of controls and procedures to address the risks identified
- requirements for the reporting of operational losses and proposed remedial action
- development of contingency plans
- training and professional development
- ethical and business standards
- risk mitigation, including insurance where this is effective.

Compliance with internal standards is supported by a programme of periodic reviews undertaken by Internal Audit. The results of Internal Audit reviews are discussed with the management of the business unit to which they relate, with summaries submitted to the Audit Committee and senior management of the Bank.

(f) Capital management

The Bank's policy is to maintain a strong capital base so as to maintain investor, creditor and market confidence and to sustain future development of the business. The impact of the level of capital on shareholder's return is also recognised and the Bank recognises the need to maintain a balance between the higher returns that might be possible with greater gearing and the advantages and security afforded by a sound capital position. There have been no material changes in the Bank's management of capital during the period.

Regulatory capital

The Bank monitors the adequacy of its capital using, among other measures, the rules and ratios established by the Central Bank of Kosova ("CBK"), which ultimately determines the statutory capital required to underpin its business.

5. Financial risk management (continued)

(f) Capital management (continued)

Capital Adequacy

The Capital Adequacy Ratio is the proportion of the regulatory capital to risk weighted exposures, calculated as the sum of the risk-weighted exposure amounts, on- and off-balance sheet for credit risk and for credit counterparty risk, capital requirement for market and operational risk.

The minimum Regulatory Capital Ratio against the risk weighted exposures required by Central Bank of Kosova is 12%. The minimum Tier 1 Capital Ratio is 8.0% and the minimum Regulatory Capital Ratio is 12%.

In December 2024, BKT has reported the following ratios which does not include the profit of the second half of the year.

- 2024 Tier 1 Capital Ratio 14.17% (2023: 12.30%)
- 2024 Total Capital Ratio 17.02% (2023: 15.91%)

Risk-Weighted Assets (RWAs)

Each exposure class has its own specific requirements on how to assess the appropriate risk weight and respective risk weighted exposures. For credit risk and counterparty risk is applied the Standardised Approach. Operational risk capital requirement is calculated based on the Basic Indicator Approach.

6. Cash and balances with Central Bank

Cash and balances with Central Bank as at 31 December 2024 and 2023 are detailed as following:

	31 December 2024	31 December 2023
Cash on hand	66,020,909	47,244,742
Balances with CBK	116,703,638	106,143,892
	182,724,547	153,388,635

Balances with the Central Bank of Kosova include the statutory reserve of 10% of customer deposits in Kosova

Cash and cash equivalents included in Statement of cash flows as at 31 December 2024 and 2023 are presented as follows:

31 December 2024	31 December 2023
182,724,547	153,388,635
(74,094,634)	(58,864,289)
76,695,822	73,459,186
185,325,735	167,983,532
	182,724,547 (74,094,634) 76,695,822

Balances with banks at 31 December 2024 and 2023 include current accounts with resident and non-resident banks.

7. Placements and balances with banks

Placements and balances with banks as at 31 December 2024 and 31 December 2023 consisted as follows:

	31 December 2024	31 December 2023
Placements	58,697,239	44,226,630
Current accounts	76,695,822	73,459,186
Accrued interest	450,748	85,762
Impairment provision	(12,052)	(7,747)
	135,831,757	117,763,831

The placements in banks are with original maturity up to 6 months and bear interest income from 2.35% up to 6.35% (31 December 2023: 3.50% to 4.75%, with original maturity up to 1 year).

8. Investment securities

Investment securities as at 31 December 2024 and 31 December 2023 are presented as follows:

	31 December 2024	31 December 2023
Treasury bonds and Eurobonds- measured at FVOCI	174,118,167	146,402,957
Corporate bonds- measured at amortised cost	65,156,909	81,962,792
Total	239,275,076	228,365,749

a) Investment securities - measured at FVOCI.

Treasury bonds and Eurobonds as at 31 December 2024 comprise as follows:

9. Loans to customers, banks and other syndication loans

9.1 Loans and advances to banks and syndication loans

Loans and advances to banks are comprised of syndicated loans to foreign banks/entities as presented in the table below:

	31 December 2024	31 December 2023
Total Loans to banks	46,850,226	49,000,000
Accrued interest	334,738	402,482
Less allowances for impairment on loans (note 24)	(95,359)	(392,205)
Loans and advances to banks	47,089,606	49,010,277

All loans are in EUR and bear interest rates ranging from 3.78% to 6.60%. All loans will mature within 4 - 27 months. The loans are not secured with collateral.

9. Loans to customers, banks and other syndication loans (continued)

9.2 Loans to customers, net

Loans to customers consisted of the following:

	31 December 2024	31 December 2023
Loans to customers, gross	785,773,548	616,661,357
Accrued interest	3,871,224	3,255,024
Less allowances for impairment on loans	(11,117,050)	(12,273,305)
Less deferred fee income	(1,332,183)	(854,742)
	777,195,540	606,788,335

Movements in the allowance for impairment on loans to customers:

	For the year ended as at December 31, 2024	For the year ended as at December 31, 2023
At 1 January	12,273,305	12,135,183
Impairment charge for the year, net	(69,392)	605,296
Written off loans	(1,086,864)	(467,174)
At the end of the period	11,117,050	12,273,305

During the year based on decision from the Board of Directors the Bank has written off loans in total amount of EUR 1,334,810 (2023: EUR 538,552), out of which impaired loans in amount of EUR 1,086,864 (2023: EUR 467,174).

The breakdown of the loan portfolio is as follows:

	2024	2023
Retail (individuals)	32%	42%
Private Enterprises	68%	58%

9. Loans to customers (continued)

9.3 Loans to customers, net (continued)

The classification of gross corporate loans including accrued interest by industry is as follows:

	31 December 2024		31 December 2	ber 2023	
	EUR	%	EUR	%	
Construction and other industries	80,681,378	18%	67,029,140	19%

25. Related party transactions

In accordance with IAS 24 "Related Party Disclosures", a related party is any party that has the ability to control the other party or exercise significant influence over the other party in making financial and operating decisions.

The Bank has related party relationships with its shareholders and affiliates, directors and executive officers. The Bank's sole shareholder is BKT Albania owned by Calik Finansal Hizmetler, which is owned by Calik Holding. The ultimate controlling party is Mr. Ahmet Calik. The ultimate parent company is Calik Holding A.S.

Aktif Yatirim Bankasi and Kosova Electricity Distribution and Supply Company J.S.C (KEDS) are controlled by Calik Holding. As at January 1, 2015 KEDS is divided into two companies: KEDS and Kosova Electricity Supply Company (KESCO).
