Notes:

*Interest rates are shown in yearly basis (365 or 366 days). Interest calculation form:

- Term Deposit, Elastic Deposit: Gross Interest = Deposit amount x Interest rate x days to maturity/365 (or 366)
- Interest of time deposits is paid on maturity date, for Rrita deposit interest is paid every year whereas interest of Record deposit is paid every 6 months.
- Interest is paid on the maturity date, unless it is specified differently.
- The bank is obliged by law to keep 10 % of the interest amount as a withholding tax.
- The Bank does not offer interest rates for Current Account Deposits.

*Elastic deposits are offered to clients with specific maturity, up to 3 years.

*By introducing this bulletin, the interest rates of the previous bulletins do not apply.

Kosovo Government Bonds	
Fee for competitive order	50.00€

	Above 100,000 EUR	Negotiable			

Note*:

**The late payment interest rate shall be calculated according to the requirement of the CBK Regulation on late interest which is the annual rate which consists of the reference rate increased by 8 percentage points fixed rate. The reference rate will be changed and published by the CBK every six months in website: <https://www.bqk-kos.org/>. The rate based on the average for the period July-December is published on February 1 and is valid for the next period from February 10 to August 9; whereas on August 1 of the calendar year the norm is published which takes as a basis the average for the period January-June and is valid for the next period from August 10 to February 9. In case the CBK has not published the new reference rate, the recently published CBK reference rate will be used.*

***In the event that the Borrower does the immediate total repayment of the remaining part of the loan, the Bank reserves the right to decide whether or not to apply a prepayment fee of 5 (five)% on the remaining part of the loan*

****Expenses not included in the calculation of the effective interest rate and which the Borrower is obliged to pay are the evaluation cost of the mortgage offered for collateral in the amount determined by the appraiser*

*****The effective interest rate on loans and overdrafts presented in the tables above is calculated on the basis of the lowest amount determined on the basis of the product and the maturity*

******The effective interest rate for the letter of credit / guarantee presented in the tables above is calculated based on standard terms with a maturity of 1 year*

- Interest for late payment shall be calculated on the amount of overdue principal along the number of calendar days overdue, depending on the number of calendar days of the year (365 or 366), applying the mathematical formula as follows:

$$LP = \frac{M * Ar * D}{Cd}$$

Where:

LP – Interest for late payment for the accounting period

M - Main late debt (principal)

Ar – Annual Rate of the Interest for late payment

D - Number of calendar days of the interest for late payment during the accounting period

Cd – Number of calendar days of the year (365 days – common year, 366 days – leap year)

- Interest for late payment calculated for each accounting period (usually monthly) is added to the calculated interest for late payment, thus, the calculated interest for late payment is the total amount of all interests on late payments calculated for all late payments of the principal until the day of calculation
